Message from the Chairman and CEO

Welcome to Datacolor's second sustainability report. Since our inaugural report last year, we have continued to evolve and mature our approach to environmental, social and governance (ESG) issues.

Throughout fiscal year 2022-2023, we focused on taking actions across all our material topics and in this report, you will read examples of how we continue to invest and meet our commitments. Here are a few key achievements from this year

- We expanded the reporting scope of our carbon footprint, calculating impacts from waste and recycling, business travel and employee commuting.
- Energy efficiency projects at our manufacturing facility in Suzhou, China resulted in less energy use, even as we increased production.
- A cross-functional team worked together to develop a new approach to product compliance that provides greater granularity of analysis across a number of environmental regulations.
Looking ahead, we see opportunities to make further sustainability progress by continuing efforts in several key areas, including:

- Implementing energy efficiency projects identified during energy audits at our office in New Jersey (USA) and our manufacturing location in Suzhou (China), as we fulfill our commitment to reduce our Scope 1 and Scope 2 carbon emissions by 50% by 2030.
- Redesigning product packaging to remove non-renewable materials and promote recycling.
- Extending e-waste documentation to all facilities, to ensure we are tracking e-waste consistently across Datacolor’s global locations.
- Deepening supplier engagement on sustainability issues, including expanded requirements for formal sign-off on our Supplier Code of Conduct.

1 This target relates to Scope 1 and Scope 2 emissions, against our FY 2022-2023 baseline.

We are proud of our progress so far, and know that there is still much more to come. Datacolor’s sustainability journey, led by our Sustainability Steering Council and with oversight by the Board of Directors, has exciting developments ahead. We hope you’ll join us on the journey.

Albert Busch  
CEO

Werner Dubach  
Chairman
## About Datacolor

### Datacolor at a Glance

<table>

Datacolor FY 2022-2023   Sustainability Report

Products and Services

Empowering Color Professionals for Over 50 Years

Since 1970, Datacolor’s color management tools and software have helped color experts the world over get color right.

- Color Management Solutions for Businesses
  - Color management tools integrate technology, engineering, and innovation to digitize color for the world’s biggest brands.
  - Benchtop Spectrophotometers
    - Increase efficiency and color confidence with our suite of precision-grade benchtop devices.
  - Portable Spectrophotometers
    - Take color management and measurement on the go with these handy, easy-to-use portable instruments.
  - Color Management Software
    - Access lab-grade matching and recipe optimization while saving time and money with our powerful color formulation and feature-rich quality control software.

- Visual Evaluation and Lab Tools
  - Find the color lab dyeing and dispense solutions, light booth, sample conditioning products you need to get color right for your brand and supply chain partners.

- Color Audit Services
  - Reduce the time and cost of product development and ensure supply chain quality with our color assessment and lab audit services.

- ColorReader for Designers
  - Color professionals capture color on-the-go with the Datacolor ColorReader, built for precision color measurement.

- Spyder for Photographers
  - Achieve your creative vision with the Datacolor Spyder, the tool professional photographers use for high-quality color calibration.
How We Help Our Customers

For over half a century, Datacolor has been dedicated to helping our customers “get color right” by employing cutting-edge digital hardware and software technologies to enhance their businesses and protect our planet. Our mission is realized through close collaboration with customers and the development of innovative products that address color challenges, minimize waste, and boost workflow efficiency.

In 2023, we experienced growing demand for sustainability education from our customers. To meet this need, Datacolor took several steps to highlight our commitment to sustainability:

- We created a new video demonstrating how our digital color management solutions support more sustainable processes across the entire supply chain.
- Our virtual textile summit included a track dedicated to sustainability issues and solutions.
- Sustainability was also a prominent theme at our major trade events, including the European Coatings Show and the Integrated Textile and Garment Manufacturing exhibition.

By featuring sustainability prominently across multiple educational channels and events, we aimed to showcase how Datacolor solutions can enable more sustainable practices for our customers.
Map of Operation

With offices across the globe, we offer the critical direct support our customers need to get color right.

- Corporate functions
- Sales and service office
- Manufacturing
Datacolor Leadership

For over 50 years, Datacolor has remained at the forefront of color management technology. Meet the leaders in color communication.

Board of Directors

Werner Dubach, 1943, CH
Chairman, Board member since 1981, Elected until AGM for fiscal 2021/22
Dipl. Ing. Chem. ETH Zurich
MBA Wharton, University of Pennsylvania
Since 2009 Chairman of the Board, Entrepreneur Partners AG
1981-2009 CEO and Chairman, Eichhof Holding AG

Jvo Grundler, 1966, CH Deputy Chairman, Board member since 2017, Elected until AGM for fiscal 2021/22
Dr. iur. University of St. Gallen
LL.M. University of Cambridge
Since 2020 Deputy Chairman, Villiger Söhne Holding AG
Since 2019 Board Member, Serto Holding AG
Since 2017 General Counsel and Board Member, HIAG Immobilien Holding AG
Since 2017 Of Counsel, Prager Dreifuss AG
2002-2017 Ernst & Young Legal Services

Hans Peter Wehrli, 1952, CH Board member since 2001, Elected until AGM for fiscal 2021/22
Prof. em. Dr. oec. publ. University of Zurich
Since 2017 emeritus Professor of Business Administration, University of Zurich
Since 2014 Board Member, Gebäudeversicherung Bern
Since 1991 Board Member, Härdi Holding AG
2002-2020 Chairman of the Board, Swiss Prime Site AG
1997-2019 Chairman of the Board, Belimo Holding AG

Thomas Studhalter, 1969, CH Board member since 2016, Elected until AGM for fiscal 2021/22
MS in Business Administration, Swiss Certified Accountant, HWV Lucerne
Since 2021 CEO, BDO AG
Since 2019 Board Member, Eisner Holding AG
Since 2019 Board Member, Bataillard AG
Since 2018 Board Member, Swiss Prime Site AG
2014-2020 Member of the Regional Management Central Switzerland, Partner, BDO AG
2007-2014 Head of the Central Switzerland region, Partner, KPMG AG

Hanno Elbraechter, 1980, DE Board member since 2018, Elected until AGM for fiscal 2021/22
European Business Program (EBP) Ecole de Management (ESC) de Bordeaux and University of Applied Sciences Münster
Since 2014 Head of Business Unit Technology, Member of Executive Committee, DKSH
2004-2014 CEO Asia, Deckel Maho Gildemeister
Executive Management

Albert Busch, 1967, US/NL CEO
BS & MS in Electrical Engineering, University of Ghent
MS in Industrial Management, Catholic University Leuven
Since 2008 with Datacolor
Since January 2009 CEO
1991 – 2008 Management roles, NV Bekaert SA

Philipp Hediger, 1975, CH CFO
MS in Business Administration, University of Fribourg
Since 2018 with Datacolor
2016 – 2017 COO/CFO and Member of Executive Management Team, Sequel
2010 – 2016 CFO, Sequel

Yazid Tohme, 1973, USA/LB
Executive Vice President R&D and Operations
BS in Mechanical Engineering, University of Kentucky MS and Ph.D. in Mechanical Engineering University of Florida
MBA, University of Massachusetts
Since 2022 with Datacolor
2021 – 2022 VP Advanced Mobility Solutions, Harman International
2019 – 2020 Chief R&D Officer and Member of Executive Team, FARO Technologies
2011 – 2019 SVP of R&D, FARO Technologies

Patrice Jaunasse, 1964, FR
Executive Vice President Sales and Support
MS in Engineering, Electronics, Telecom and Computer, ESEO
Since 2012 with Datacolor
2002 – 2011 General Manager and Sales Director EMEA, Tektronix
1998 – 2002 President and Sales Director, Nettest Telecom Instrumentation
Our Approach to Sustainability

While Datacolor has a long history of corporate social responsibility, in late 2021 the company more formally developed its sustainability strategy and approach to environmental, social and governance (ESG) issues.

Materiality

Working with an outside sustainability consulting firm, Datacolor completed its first materiality assessment in 2021 to identify and organize the most important sustainability topics.

Using the Sustainability Accounting Standards Board (SASB) Standards for the Hardware Industry and the Software & IT Services Industry as a guide, we identified nine material topics organized into three workstreams: Responsible Operations, Sustainable Products, and Rewarding Workplace.

The resulting sustainability framework was used to develop a three-year sustainability roadmap to prioritize and plan for future ESG initiatives and guide the structure and content of this sustainability report.

Sustainability Steering Committee

Datacolor’s Sustainability Steering Committee, comprising cross-functional senior leaders, is responsible for the oversight and sponsorship of ESG activities. The Committee meets monthly to review progress against the annual sustainability action plan, identify and direct resources to upcoming initiatives and ensure seamless coordination between departments working on complex environmental and social initiatives. Datacolor’s Chief Executive Officer, chair of the Sustainability Steering Committee, reports directly to the Board of Directors.

During the reporting year, the Sustainability Steering Committee oversaw management of a wide variety of ESG issues, but focused particularly on four key topics:

- Expanding the scope of our supply chain sustainability program, including a new supplier screening questionnaire
- Developing a carbon reduction plan, beginning with an energy audit of our manufacturing facility in China and implementation of high-priority energy efficiency projects
- Integrating sustainability considerations into Datacolor’s product development process, from sourcing to end-of-life, including an expanded refurbishment program in North America
- Bolstering our safety tracking systems to ensure that all Datacolor offices have appropriate policies and procedures to provide a safe and healthy workplace.
Ethics and Integrity

At Datacolor, every decision we make is grounded in a commitment to ethics and integrity. Our corporate governance structure and sustainability practices ensure that fairness, integrity and accountability are embedded across all business functions.

Code of Ethics/Policies

In FY 2021-2022, we updated our employee policies and created a separate Global Code of Conduct, which lays out our expectations and requirements for ethical business practices, fair labor and working conditions and environmental responsibility including:

- Bribery and corruption
- Conflict of interest and competition
- Confidentiality and trade secrets
- Diversity and inclusion
- Discrimination and harassment
- Work hours, wages and benefits
- Professional growth and development
- Privacy and data protection
- Health and safety
- Workplace security
- Child labor and forced labor
- Freedom of association

This year, Datacolor employees completed compliance training covering the Global Code of Conduct and Datacolor core values: Customer Focus, Teamwork, Ownership, Execution, Passion, Learning and Ethics.

The Code of Conduct applies to all executives, directors, managers, and permanent and temporary employees of the company. This policy applies to all prospective and current employees of the company, as well as volunteers, contractors and consultants. Suppliers are expected to abide by these same values, which are covered separately in our Supplier Code of Conduct.

Oversight of this policy is provided by Datacolor’s Board of Directors. Responsibility for implementing the policy is held by the Compliance Officer.
Reporting Concerns and Whistleblower Protection

Datacolor adopted a whistleblower policy in 2019, which was later incorporated into the Global Code of Conduct. The policy provides options for employees and contractors to report breaches of general law, violations of Datacolor policies, or actions contrary to generally recognized principles of business ethics.

Under the Whistleblower Policy, Datacolor will not take adverse action against the Whistleblower for making disclosures in good faith, nor will it permit any employee or other person subject to Datacolor’s control to retaliate against the Whistleblower. This protection of good faith disclosures applies regardless of the outcome of the investigation and even if a disclosure contains mistakes or errors. This protection also extends to persons who provide evidence or otherwise participate in the investigation.

Employees or contractors who retaliate against a Whistleblower or against anyone who provides evidence or otherwise participates in an investigation are subject to disciplinary action including termination of employment or business relations.

Supply Chain Sustainability

Our approach to supply chain sustainability is about ensuring that Datacolor’s sustainability values, expectations and requirements are upheld throughout the supply chain--on both the environmental and social issues. This includes how we choose our suppliers, how we mitigate sustainability risk in the supply chain, and ongoing engagement and collaboration with key suppliers that share our values.

Our strategies:

1. Engage with suppliers so they understand our expectations
2. Implement supplier screening to identify and mitigate sustainability risk
3. Engage in sustainable supply chain collaboration opportunities

Supplier Code of Conduct

We are committed to conducting our business in an ethical, legal and socially responsible manner, and we expect Datacolor suppliers to share this commitment. Although there may be different legal and cultural environments applicable to suppliers, we require that suppliers comply with our Supplier Code of Conduct and meet minimum requirements in the following areas:

- Compliance with laws, regulations and published standards
- Anticorruption and fair competition practices
- Intellectual property
- Environmental practices
- Occupational health and safety practices
- Labor and human rights practices
- Monitoring, auditing and compliance

While this policy applies to all suppliers, significant suppliers—those who provide materials directly related to the production of our products—are required to sign their acknowledgment of our Code. In FY 2022-2023, we expanded that requirement to also include service providers with whom Datacolor spent at least $250,000 during the reporting period.

Datacolor reserves the right (in addition to all other legal and contractual rights) to disqualify any potential supplier or terminate any relationship with any current supplier found to be in violation of our Supplier Code of Conduct.

Carbon and Climate

Datacolor recognizes that climate change is an urgent and complex challenge and that we have a role to play. We are committed to reducing our carbon footprint throughout our value chain and implementing decarbonization strategies into our product design process.

Our strategies:

1. Track and report our energy use, so that we can measure progress over time
2. Take a lifecycle approach to reduce our carbon footprint

Carbon Footprint

With climate change being an urgent and complex challenge, we are committed to reducing our Scope 1 and Scope 2 carbon footprint by 50% by 2030.

Last year, we completed our baseline greenhouse gas (GHG), calculating our carbon footprint to better understand our operations’ impacts and opportunities for improvement.

This year we expanded the scope of our data collection to look more closely at our supply chain.

The results showed that, unsurprisingly, our biggest impacts are related to our manufacturing operations. And across our emissions-generating activities, electricity accounts for exactly half (50.0%) of our FY 2022-2023 emissions. As a result, we are focusing on energy efficiency opportunities in our manufacturing facilities to drive carbon reduction over the next few years.
Energy

While a few of our offices use natural gas for heating during the cooler months, our main source of energy comes from electricity consumption, primarily at our manufacturing facility in Suzhou, China.

Longer term, we hope to transition to renewable energy sources for our electricity needs, as the Chinese renewable energy market continues to mature.

In the short term, our focus is on finding opportunities to improve energy efficiency. This year, we worked with an external consultant to conduct an energy audit at our Suzhou facility. The results identified more than two dozen projects, six of which we acted on immediately:

1. Energy monitoring technology
2. Emissions calculation tool
3. Energy training for key team members
4. Lighting system improvements
5. Air conditioning upgrades
6. Air compressor modifications

Product Safety

At Datacolor, we think about product safety in an expansive way – from the safe operation and handling of our products to the privacy and security of the information we store.

Our strategies:

1. Ensure product safety is built into the entire lifecycle, from design → manufacturing → use → end-of-life
2. Enable customers to use our products safely through training and education
3. Implement systems to protect data privacy and security

Quality Assurance

We are relentless about the reliability and quality of our products. Datacolor is ISO 9001:2015 and ISO/IEC 17025:2017 certified. Our quality management systems include six key elements:

- **Document control** ensures that everyone in the organization has access to the most accurate and recent instructions and maintains proper records
- **Record control** includes the identification, storage, retention, protection, disposition, and retrieval of records, supporting compliance and enhancing the accessibility of data to improve business operations
- **Internal audits** identify and mitigate operational risks and check the effectiveness of internal controls in areas like administration, accounting, and financial reporting
- **Product control** helps us identify and eliminate the production and delivery of products or services that fail to match up to the specified quality requirements
- **Corrective action** processes define a problem, determine its cause, contain it, and develop appropriate actions to prevent the issue from occurring again
- **Risk and preventive action** creates processes to determine the risks and opportunities that need to be addressed to assure the quality management system is effective and can achieve continual improvement
Product Safety

To ensure that our products can be operated and handled safely, we engage:

- Safety-Focused Design
  - Datacolor product designers have extensive safety guidelines and protocols, ensuring that safety considerations are taken into account throughout the design process.
- Third-Party Safety Certification
  - Datacolor uses independent, third-party safety and reliability testing. These testing and certifications are designed to ensure that products and their components meet applicable laws, regulations and industry standards.

Data Privacy & Security

Datacolor has integrated data protection and privacy features into system engineering, practices, and procedures. This approach, called “Privacy by Design,” guides our Privacy Policy, our approach to data handling and storage, the use of personally identifiable information, and cybersecurity. We follow these seven core principles:

1. Privacy must be proactive, not reactive

   Anticipate and prevent events that violate privacy. Identify systems that do a poor job of protecting the privacy and take steps to correct them. This principle reflects a high-level commitment to privacy and the establishment of ways to integrate privacy concerns into new projects.

2. Privacy must be the default setting

   Systems should automatically protect privacy, even if a user does nothing. For example, you should create user settings that are automatically set to the highest privacy level, and default to collecting the least personal information needed.

3. Privacy must be embedded in the design

   Privacy should form part of a system's architecture. Privacy should not be sacrificed just for easier interaction and handling. When involving third-party service providers for processing personal data, those service providers also need to follow the privacy requirements that Datacolor needs to meet. This often requires a – so-called – Data Processing Agreement as part of the service contract.

4. Privacy integrations must offer full functionality

   Users should never have to make the choice between full functionality and privacy protection. They should have full access to features without having to give up more of their personal information (positive-sum instead of zero-sum).
5. Systems must offer end-to-end security and full lifecycle protection

Privacy protections follow the data, wherever it goes. These principles apply when the data is first created, shared with others, and then finally archived. Appropriate encryption and authentication should protect the data till the very end when it finally gets deleted.

6. Privacy standards must offer visibility and transparency

Datacolor is open and accountable about how we collect, store and use personal information. We are providing a global company privacy policy which can be found on our website explaining exactly how we handle personal data.

7. Respect for User Privacy

Always keep the privacy interests of the user in mind. Ask for consent from the user, give notice about privacy policy updates, and remain open and accountable. There needs to be a purpose for collecting data. Don’t store anything personal just because “it’s nice to have” or “we might need this in the future”. Make sure that there is a reason for storing the data and that the user has given consent or there is a legal basis that allows us to store and process the data.

Materials Management

We think carefully about the materials that we use and how to minimize their impact on the environment. Because our ultimate goal is to design products that solely use recycled and renewable materials, we’re incorporating that thinking into product design and development, supplier selection, purchasing and packaging.

Our strategies:

1. Shift to low-impact raw materials
2. Prioritize raw materials with verified sustainability practices
3. Prioritize packaging that is made from renewable/recyclable materials and packaging that can easily be recycled

Materials of Concern

Because we sell our product globally, Datacolor must comply with a complex set of rules, regulations and laws about chemicals, metals and minerals. We work carefully with customers to ensure that Datacolor products meet their specifications and are in compliance with applicable requirements.

This year, we expanded our product compliance processes to include product-level testing. This process allows us to more specifically target parts and components that use restricted substances and pursue modifications to parts and suppliers when needed. Our product testing covers:

- ROHS 2.0
- REACH-SVHC and Appendix 17
- EU-POPS
- WEEE Directive
- California Prop 65
- Toxic Substances Control Act (TSCA)
- Canadian Environmental Protection Act (CEPA) Toxic Substances List

Conflict minerals refers to raw materials that come from a particular part of the world where conflict is occurring and affects the mining and trading of those materials. They currently include the metals tantalum, tin, tungsten and gold, which are the extracts of the minerals cassiterite, columbite-tantalite and wolframite, respectively. Datacolor does not source any conflict minerals directly. For component parts that may include related metals, we work with suppliers to ensure they have appropriate tracking and controls in place.
Packaging

Across our industrial and commercial product lines we think carefully about packaging, balancing the need to protect each product during transportation with the environmental impacts and financial cost of packaging systems. Next year, we will be launching a more detailed review of our consumer packaging, including:

- Developing a plan to ensure we provide clear documentation about how to safely recycle or dispose of product components and packaging for every Datacolor product
- Ensuring that all plastic packaging has the recycling number (1-7) identified on all new products and existing products with new packaging configurations
- Amending our product design process to include a specific step to consider the environmental impacts of packaging decisions
- Identifying opportunities to move away from plastic packaging for selected consumer products
This year, we undertook two significant projects to improve our packaging impacts. First, we expanded our participation in GreenDot®, an internationally-recognized packaging take-back and recycling program. The Green Dot® on Datacolor packaging indicates that a financial contribution has been paid to a nationally authorized take-back system.

We also began a process to redesign our product packaging away from plastic and towards 100% renewable and recyclable materials. During the reporting year, we launched two new product configurations:

- **SpyderX2**: replaced the plastic blister with a paper blister, taking the packaging to 100% renewable materials
- **DC1000**: designed a fitted corrugate piece that eliminates the need for polystyrene blocks to cushion the product during transportation

End of Life Management

We are committed to integrating and optimizing the environmental impacts of our products and services at every stage of the product life cycle, with the goal that our products should never end up in a landfill. Extending the useful life of our products, creating secondary marketplaces for used/refurbished products, and empowering customers to make smart end-of-life disposition choices help us fulfill that commitment.

Our strategies:

1. Design products that can be easily repaired, refurbished and recycled
2. Extend the lifecycle of products through reuse, donation and refurbishment programs
3. Develop programs to understand and eliminate the landfilling of products at the end of their useful life

Refurbishment Program

To manage the end-of-life impacts for our consumer products, which typically have a lower price point and a shorter lifespan, Datacolor has developed a comprehensive refurbishment program. In fiscal year 2022-2023, Datacolor generated more than $199,400 in revenue from the sale of refurbished units.

- In the United States, Datacolor partners with eBay to sell certified refurbished products. From Datacolor’s eBay store, customers get access to eBay’s Certified Refurbished Programs’ longer warranty. Datacolor Certified Refurbished is one of eBay’s most reputable sellers, consistently delivering outstanding customer service.

- In Asia, our refurbishment program is managed by our distributor, who sells them in an exclusive e-store. Customers can purchase refurbished products at a lower price, but with the same warranty as new products.

- In Europe, users and partners send their products back to Datacolor to refurbish the units with new serial numbers and new packaging. Refurbished units are sent to selected retailers, who sell the products to new users. Units that are too damaged for refurbishment are recycled by a third party.
Trade-In Program

Our industrial product lines are designed to work for many years, and their higher price point encourages users to extend each unit’s useful life to the maximum extent possible. Nonetheless, when the time comes for a user to upgrade their product, Datacolor is ready to minimize the older product’s end-of-life impacts.

Our trade-in programs allow selected customers to ship back their original unit to Datacolor, where we salvage parts that can be used again, such as monochromators and specular port mechanisms. The remaining parts are then destroyed and disposed according to local regulations.

Health and Safety

Our approach to employee health and safety is focused on the practices that ensure employees and contractors go home safe and healthy each day. While we primarily emphasize physical health, we also look at emotional, social, and psychological wellbeing.

Our strategies:

1. Implement health and safety systems to identify and mitigate job hazards
2. Equip employees to be safe at work, through training and education, personal protective equipment and sharing of best practices
3. Track and report safety incidents, including near misses, to understand and improve our safety performance
4. Inform employees on mental wellbeing through our wellbeing website

Safety Management Approach

Datacolor is committed to providing a healthy and safe workplace. Each employee is responsible for working safely and for making use of training, resources and equipment provided to support a safe work environment. Our safety management systems include:

- **Hazard assessment**: We assess job hazards to ensure that appropriate steps are taken to maintain a safe working environment. Employees must immediately notify their manager of any immediate and significant danger to safety and health, or if any defect is found in our safety management systems.

- **Health screenings**: Selected workers at our manufacturing facilities undergo annual health screenings to ensure that they are not adversely impacted by any workplace health and safety concerns.

- **Employees receive safety training** appropriate to their job function. In particular, manufacturing and production employees receive regular training on topics ranging from how to prevent slips and falls to safe equipment handling.

- **Workplace security**: Datacolor is committed to maintaining a workplace that is free from violence, harassment, intimidation and other unsafe or disruptive conditions due to internal and external threats. Security safeguards for employees are provided, as needed, and are maintained with respect for employee privacy and dignity.
Safety and Health Upgrades

During fiscal year 2022-2023, Datacolor updated its global environment, health and safety (EHS) management systems. This process included a new safety incident tracking tool, additional training, and an updated EHS policy that more specifically addresses key occupational health and safety considerations:

PREVENTATIVE ACTIONS

- We comply with all applicable occupational health and safety regulations
- Preventative measures to reduce safety hazards are in place, with periodic assessments and job hazard analysis to minimize risk
- We hold employee training sessions in health & safety standards and procedures
- When employees work in dangerous contexts or locations, we make sure there are safety precautions
- We provide protective gear like gloves, uniforms and ergonomic supports, where appropriate
- Inspectors and quality control employees inspect equipment and infrastructure regularly

EMERGENCY MANAGEMENT

- Technicians (external or internal) are available to repair leakages, damages and blackouts quickly
- Fire extinguishers and other fire detection and protection equipment are easily accessible
- An evacuation plan is posted on the walls of each floor in every building
- Fire escapes and safety exits that are clearly indicated and safe
- Fully-stocked first-aid kits are available at convenient locations
ADDITIONAL MEASURES

- We periodically review our policies and procedures to respond to changing best practices and new occupational health and safety legislation and regulation
- We analyze past incidents to discover what went wrong and how to prevent recurrence
- Clear procedures for accident reporting ensure accurate and timely health and safety tracking
- We consult experts to ensure our health and safety practices comply with relevant laws and regulations

We also completed two significant projects at our manufacturing facility in China, creating healthier and safer workplaces for our employees. They included:

- **Emergency preparedness**: we developed and implemented an annual hazardous chemical emergency response drill
- **Health and safety assessments**: we expanded our health and safety risk assessments to include additional screening for particularly vulnerable workers, such as pregnant women and new mothers

Diversity

We are committed to making Datacolor a safe, welcoming and inclusive workplace where everyone can be their authentic selves. This includes a focus on diversity and inclusion in recruitment/retention practices, family-friendly and worker-friendly policies and benefits, and workplace diversity demographics.

Our strategies:

1. Support efforts for more diverse candidates now and into the future
2. Develop diverse pipelines for promotion into leadership positions
3. Track and report diversity data to understand and improve over time

Anti-Discrimination and Equal Employment Opportunity

Datacolor is committed to equal employment opportunity. Consistent with that goal, the Company is opposed to discrimination against any employee or job applicant because of their race, color, national origin, ancestry, birthplace, culture, nationality, citizenship, linguistic characteristic associated with an ethnic group, religion, creed, age, sex, sexual orientation, gender identity or expression (including gender reassignment), liability for military service, atypical hereditary cellular or blood trait, disability or handicap, marital or family status, domestic partnership, civil union or any other characteristic protected by law. These principles apply to all personnel decisions and to all terms and conditions of employment. Datacolor makes reasonable efforts to accommodate disabilities and religious practices in accordance with law.

In FY 2022-2023, we removed references to gender in our job descriptions, job contracts and offer letters. We also explored a variety of diversity-focused job recruitment tools, specifically focused on the African American and Hispanic/Latinx communities.

Preventing Harassment and Bullying

Datacolor seeks to provide and maintain a workplace that is free of harassment of any kind. We prohibit any conduct that contributes to an intimidating or offensive work environment and/or interferes with a person’s ability to perform their job, particularly when such conduct is based on a sexual, ethnic, religious, racial slur, other verbal or physical conduct relating to a person’s:

- Age
- Genetics
- Marital or Family Status
- Religion
- Color
- Gender
- National Origin
- Sexual Orientation
- Disability
- Gender Identity
- Race
- Veteran Status
We do not tolerate harassment of employees by non-employees (e.g., clients, contractors, vendors) and, upon being made aware of same, will take steps to protect our employee from such conduct.

**Excerpt from our Code of Conduct:** Do not assume that behavior that is not offensive to you is welcomed by others. Harassment may involve, but is not limited to, co-workers, supervisors, vendors, or clients. Harassment is a very serious violation of the Company policy and may result in counseling and disciplinary action up to and including termination of employment.

Not all numbers add to 100 due to rounding.

1 U.S. workforce only. Racial/ethnic diversity is based on United States EEO-1 categories and includes employees who self-identify as Asian, Black or African-American, Hispanic or Latino, and two or more races (not Hispanic or Latino).
Fair Labor

At Datacolor, we are committed to upholding labor and human rights across our global operations. Our approach includes strong human resources practices that provide protections for employees, as well as opportunities for career advancement and skill building. We measure employee engagement and turnover to ensure that we remain a competitive employer, seen as a great place to work.

Our strategies:

1. Enact policies and programs that create a welcoming workplace, based on respect and inclusion

2. Use feedback mechanisms to understand and improve employee satisfaction and engagement

Commitment to Labor and Human Rights

At Datacolor, we are committed to upholding labor and human rights in our relationships with employees, customers, suppliers, partners and in the communities in which we operate. Our approach to labor and human rights is informed by international laws, conventions and frameworks including the United Nations Guiding Principles on Business and Human Rights, the Universal Declaration of Human Rights, and the International Labor Organization’s 1998 Declaration on Fundamental Principles and Rights at Work.

We recognize that we are part of the communities in which we operate, and we are committed to engaging in good faith with communities on human rights issues important to them. Where appropriate, we also engage with a wide range of civil society and other stakeholders on human rights issues related to our business. This includes issues in our company, across our value chain and with our community involvement.

Promise of Respect and Fair Treatment

Datacolor is committed to treating all employees with respect and fairness. To demonstrate our commitment, we encourage employees to voice concerns about their treatment in an atmosphere of respect and cooperation.

Forced Labor and Human Trafficking

We prohibit the use of all forms of forced labor, including prison labor, indentured labor, bonded labor, military labor, modern forms of slavery and any form of human trafficking.

Child Labor

We will not tolerate the use of child or forced labor in any of our operations and facilities. We do not tolerate the exploitation of children, their engagement in unacceptably hazardous work, and the physical punishment, abuse, or involuntary servitude of any worker.
Freedom of Association
We respect our employees’ right to join, form or not to join a labor union without fear of reprisal, intimidation, or harassment. Where employees are represented by a legally recognized union, we are committed to establishing a constructive dialogue with their freely chosen representatives. The Company is committed to bargaining in good faith with such representatives.

Employee Engagement
We recognize that the engagement and satisfaction of our employees depends on listening to their concerns, equipping them to do their jobs successfully and providing opportunities for growth and advancement. To ensure that we are providing employees with what they need, so that they can perform at their best, we have a three-prong approach to engagement:

- **Training for directors and managers:** good management skills do not just appear; they need to be built and reinforced over time. In fiscal year 2022-2023, we offered a webinar on Diversity, Equity and Inclusion. A follow-up survey showed that the training was well received, with positive feedback across the company.

- **Engagement surveys:** we conduct an annual engagement survey to track employee sentiment over time. We ask questions about leadership and mission, training and development, career opportunities, care for employees and performance management. In fiscal year 2022-2023, 90% of Datacolor employees participated in the engagement survey, with an overall score of 4.2 (our of 5), an increase of 0.1 from the previous year.
- **Ongoing feedback**: through an open-door policy and ongoing coaching and mentoring opportunities, we encourage employees to speak up outside of formal engagement channels. We are a close-knit team and opportunities to collaborate and innovate create daily opportunities to strengthen our team relationships.

In FY 2022-2023, we added two new employee development tools. First, we began to develop new tools for knowledge transfer, making sure that important information and processes are conveyed from individual employees to their colleagues. Second, we implemented a succession planning system to ensure a smooth transition as Datacolor continues to grow and evolve.

About This Report

Scope and Boundaries

This is Datacolor’s second annual sustainability report, covering fiscal year 2022-2023 performance, from October 1, 2022 to September 30, 2023. The scope includes 100% of our operations using the operational control consolidation approach, unless otherwise noted.

Datacolor’s carbon footprint, as well as the supporting environmental data used to make carbon calculations, following the Greenhouse Gas Protocol and included:

- **Scope 1**
  - Stationary: natural gas used for heating buildings
  - Mobile: company vehicles that utilize diesel and unleaded gasoline and which are owned or leased by the company

- **Scope 2**
  - Electricity: (grid) used to power building systems including HVAC, lighting, irrigation, and water heating

- **Scope 3**
  - Category 5: Waste in operations: waste generated at our headquarters in New Jersey (USA) and our manufacturing site in Suzhou (China), which makes up the bulk of our employee base and the majority of our waste. Waste streams included: waste to landfill, mixed recycling, aqueous hazardous waste, solid hazardous waste
  - Category 6: Business travel: passenger car vehicles owned and operated by third parties, including vehicles owned by employees, where the company reimburses employees and other third parties for vehicle use
  - Category 7: Employee commuting: calculated based on employee survey data, including in-office vs. remote work, estimated round trip travel distance to and from the office, the method of commute, carpool information, and vehicle model and fuel type for person passenger vehicle when driving/carpooling. Average documented fuel/electricity consumption data for each vehicle to determine the annual fuel or electricity usage for each commuting employee creates a reasonable estimate of average annual emissions per employee.
The emissions factors applied to activity data for this GHGI incorporate the 100-year global warming potentials (GWP\textsubscript{s}) adapted from IPCC Assessment. Datacolor’s fiscal year 2022-2023 greenhouse gas inventory (GHGI) utilizes the GWP\textsubscript{s} presented in the Fifth Assessment Report (AR5). Emissions factors included WRI GHG Tool Version 4.7 International factors (electricity), EPA Climate Leaders Emissions Factor Hub (natural gas, gasoline and passenger car vehicle miles) and Environmentally Extended Input Output Emissions Factors (ground transportation spend). Some exclusions for specific data points are noted in our Inventory Management Plan, but these are deemed to be minimal and with negligible impact on our overall results.

External Verification and Assurance

The Datacolor Executive Committee has reviewed this report and believes the contents to be accurate, fair and balanced. The report has not been assured by an external entity, nor has the data been third-party verified.

Restatements

There are no corrections or updates from previous reports.
